

No. 8264

JVC Service Manual

MODEL **TM-P3E**

VICTOR COMPANY OF JAPAN, LIMITED

Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

• Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the \triangle symbol and shaded () parts are critical for safety. Replace only with specified part numbers.

Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Use specified internal wiring. Note especially:

- 1) Wires covered with PVC tubing
- 2) Double insulated wires
- 3) High voltage leads

4. Use specified insulating materials for hazardous live parts. Note especially:

- 1) Insulation Tape
- 2) PVC tubing
- 3) Spacers
- 4) Insulation sheets for transistors

5. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

Fig. 1

6. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.)

7. Check that replaced wires do not contact sharp edged or pointed parts.

8. When a power cord has been replaced, check that 10—15 kg of force in any direction will not loosen it.

Fig. 2

9. Also check areas surrounding repaired locations.

10. Products using cathode ray tubes (CRTs)

In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the parts specified. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

11. Crimp type wire connector

In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

1. Connector part number : E03830-001
2. Required tool : Connector crimping tool of the proper type which will not damage insulated parts.
3. Replacement procedure
 - 1) Remove the old connector by cutting the wires at a point close to the connector.
Important : Do not reuse a connector (discard it).
 - 2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.
 - 3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.
 - 4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.
 - 5) Check the four points noted in Fig. 7.

Fig. 3

Fig. 4

Fig. 6

Fig. 5

Fig. 7

• Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d),(d') between soldered terminals, and between terminals and surrounding metallic parts. See table below.

Fig. 8

Table 1: Ratings for selected areas

AC Line Voltage	Region	Insulation Resistance	Dielectric Strength	Clearance Distance (d),(d')
100 V	Japan	$\geq 1 \text{ M}\Omega/500 \text{ V DC}$	1 kV 1 minute	$\geq 3 \text{ mm}$
110 to 130 V	USA & Canada	---	900 V 1 minute	$\geq 3.2 \text{ mm}$
* 110 to 130 V 200 to 240 V	Europe Australia	$\geq 10 \text{ M}\Omega/500 \text{ V DC}$	4 kV 1 minute	$\geq 6 \text{ mm (d)}$ $\geq 8 \text{ mm (d')}$ (a Power cord)

* Class II model only.

Note. This table is unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

4. Leakage current test

Confirm specified or lower leakage current between B (earth ground, power cord plug prongs) and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method: (Power ON)

Insert load Z between B (earth ground, power cord plug prongs) and exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure and following table.

Fig. 9

Table 2: Leakage current ratings for selected areas

AC Line Voltage	Region	Load Z	Leakage Current (i)	Earth Ground (B) to:
100 V	Japan		$i \leq 1 \text{ mA rms}$	Exposed accessible parts
110 to 130 V	USA & Canada		$i \leq 0.5 \text{ mA rms}$	Exposed accessible parts
110 to 130 V 200 to 240 V	Europe Australia		$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ nA dc}$	Antenna earth terminals
			$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Other terminals

Note. This table is unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

FEATURES

- Automatic switching between PAL and SECAM colour systems with manual override for PAL.
- Compact, lightweight 3-inch video monitor designed especially for portable application.
- Flexible 3-way power supply system — rechargeable Ni-Cad battery pack, AC power pack and car battery adapter (all optional).
- All power supply units — battery packs, AC power pack and car battery adapter — are the same as those used with the **HR-13**.
- Two sets of audio and video input connectors with input select switch and corresponding input indicators on the front panel beside the screen.
- Input signals that are being monitored are directly output through the bridged-out connector.
- Sliding hood to reduce screen glare for optimum viewability.

PRECAUTIONS

Handling and storage

- Prevent inflammables, water and metallic objects from entering the unit.
- Do not disassemble or modify the unit, as this will cause danger and malfunctioning.
- Do not use the unit when there is lightning in the vicinity and exercise special care not to allow the unit to become wet.
- Do not place heavy objects on the unit.
- Do not subject the unit to vibrations or shocks.

- Do not subject the unit to direct sunlight or place it near a heater for a long period of time, otherwise the cabinet may become deformed or the internal electronic components such as transistors may be damaged. Pay special attention to rising temperature in closed cars on hot summer days; the temperature in closed cars sometimes reaches as high as 80°C.
- Avoid using the unit under the following conditions:
 - Extremely hot or cold places
 - Near appliances generating strong magnetic fields
 - Places subject to excessive humidity, dust or vibrations.
- Do not use strong cleaning agents such as benzine or thinner to clean the cabinet nor spray any volatile agent such as insecticides on the cabinet. These may damage the cabinet.
- When the cabinet is extremely dusty or soiled, clean by gently wiping with a piece of soft cloth soaked in a diluted neutral cleaner.
- When cleaning the unit, be sure to unplug the AC power cords of all connected equipment.

CONTROLS AND CONNECTORS

- AUDIO/VIDEO INPUT connectors**
Connect two video/audio sources such as a video cassette recorder, a TV tuner or a videodisc player.
- AUDIO/VIDEO OUTPUT connectors**
Connect a video/audio unit such as a video cassette recorder or another monitor. The input signal that is being monitored on the screen is directly bridged out to the connected unit.
- 75-ohm termination button (75 Ω/OPEN)**
Leave the button in its "out" position (75 Ω) when using the monitor for monitoring only. When other equipment such as a 2nd video recorder is connected to the VIDEO OUTPUT terminal for recording, be sure to press this button to OPEN.
- INPUT SELECT button**
Selects between the signals applied to the AUDIO/VIDEO INPUT connectors 1 and 2.
(INPUT 1 : INPUT 2)

- POWER UNIT EJECT button**
Push this button to remove the attached power unit.
- INPUT indicators**
The corresponding indicator lights according to the selected audio/video input 1 or 2.
- Sliding hood**
Extends forward to eliminate reflections.
- Stand**
Supports the unit on a level surface. The stand can be positioned at various angles to adjust the viewing height of the monitor, but do not push down on the monitor when the stand is erected.
- H-HOLD control**
This control has been optimally adjusted. Do not turn it except to service the unit.
- Colour system select switch (PAL/AUTO)**
The AUTO position permits both PAL and SECAM signals to be monitored. If noisy or unstable pictures should occur when monitoring PAL signals, set the switch to PAL.

- V-HOLD control**
Turn to correct a vertically rolling picture.
- COLOUR control**
- Brightness control (BRIGHT)**
- Contrast control (CONTR)**
- VOLUME control**
- POWER button**
- Tripod socket**
This monitor can be mounted on a tripod. When mounting it on the tripod, secure firmly. The small hole beside the tripod socket accommodates the positioning stud on the tripod.

POWER SUPPLY SYSTEM

The convenient 3-way power supply system gives you a choice of the most appropriate power supply unit, depending on the application.

With AC power

Use the optional AC-P3EG/EK AC power pack.

Where AC power is not available

Use the optional NB-P3U regular battery pack or NB-P4U high-capacity battery pack.

In a car

Use the optional AP-P3E car battery adapter.

ATTACHING & REMOVING POWER SUPPLY UNITS

- The method of attachment and removal is identical for all power supply units.
- Be sure to switch off all power switches before attachment or removal.
- Check to see if the power terminals on the side to the rear of the unit are covered with the terminal cover. If not, slide the terminal cover in the direction of the arrow.

Align the marks.

Slide until the unit locks in place.

While pressing the POWER UNIT EJECT button ...

... slide off.

CHARGING THE BATTERY PACK (OPTIONAL)

A WORD ON THE EXCLUSIVE NB-P3U/NB-P4U BATTERY PACKS

The NB-P3U/NB-P4U are nickel-cadmium batteries. Give attention to the following to make the most of their characteristics.

Terminals
Do not short-circuit

Temperature ranges:

The recharging time is based on room temperature of 20°C. The lower the temperature, the longer the recharging time.

For charging: 10°C to 35°C

For operating: -10°C to 40°C

For storing: -10°C to 30°C

The battery pack has been kept in the uncharged state for shipment. Therefore, before use, charge it.

- **Avoid repeated charging.**
Charging the battery pack repeatedly without using it may cause over-charging and shorten its service life.
- **Recharge using only a specified charger at 10°C to 35°C.**
Especially avoid recharging in a place under 10°C, as it may cause over-charging.
- **After use, store in a discharged condition.**
- **Do not store in places of high temperatures.**
Choose a dry place with temperatures between -10°C and 30°C for optimum storage.
- **The battery pack becomes warm immediately after being charged. This is not due to any defect.**

Caution

The terminals are exposed on the bottom of the battery pack. DO NOT short-circuit these terminals.

- If they are shorted, a great amount of current flows. This is not only very dangerous, but also makes the battery pack unusable.
- When transporting or storing the battery pack, exercise special care so that no metallic object touches the terminals.
- Always keep the terminals clean. If they become dirty, wipe them with a piece of soft cloth.
- The fully charged NB-P3U battery pack provides power to the TM-P3 for about 1 hour 15 minutes of continuous monitoring; the NB-P4U, for about 2 hours 5 minutes.
- Continuous monitoring time in this case refers to the amount of time before the monitored picture starts to break up when viewing it continuously with the colour, brightness and contrast controls all adjusted to the standard setting.

Use the BB-P3EG/EK battery charger (optional). Charging time is about 60 minutes for a regular battery pack and 90 minutes for a high-capacity battery pack.

- The charging time differs depending on the ambient temperature and the condition of the battery pack.

Align the marks.

Slide until it locks in place.

3 Connect to a wall outlet.

Press the POWER button. The POWER indicator will light first and the CHARGE indicator will light in a few seconds.

When charging is completed, the CHARGE indicator goes out.

- If the POWER button is left in its ON position after the CHARGE indicator goes out, additional charging continues with a small amount of current.

Remove the battery pack by sliding it off.

Note:

- If the terminals on the charger are exposed, attaching the battery pack is impossible. Move the cover over the terminals by hand.

CONNECTIONS – Input Connectors

Input Connectors

Two audio/video sources can be simultaneously connected to this unit. Press the INPUT SELECT button to select the input signal you want to monitor.

- Instead of a video recorder other units such as a TV tuner with audio/video output terminals or a videodisc player can be connected to these AUDIO/VIDEO INPUT connectors.

• INPUT SELECT button

Input source 1: monitored with the button in the up position. Press the button to monitor the input source 2.

Input source 2: monitored with the button in the down position. Press the button again to monitor the input source 1.

Input Source 1

ATTENTION

With this connection, be sure to set the 75-ohm termination button to the 75 Ω position.

Input Source 2

CONNECTIONS – Output Connectors

Output Connectors

The audio/video input signal that is being monitored can be directly output to a connected unit. Connect a video recorder to these AUDIO/VIDEO OUTPUT connectors for dubbing or editing.

When dubbing

1. Play back the tape to be dubbed on the video recorder connected to one of the AUDIO/VIDEO INPUT connectors.
2. Monitor the playback picture.
3. Engage the video recorder connected to the AUDIO/VIDEO OUTPUT connectors into the Record mode at the point you want to start dubbing.

ATTENTION

With this connection, be sure to set the 75-ohm termination button to the OPEN position.

For tape-to-tape dubbing

OPERATION PROCEDURE

Preparation

- Attach a battery pack. (See page 6.)
- Connect to a video recorder or another audio/video source. (See page 9.)

Colour system select switch (PAL/AUTO)

- Leave the switch in the AUTO position in most cases when monitoring PAL or SECAM signals. Only when the picture breaks up or becomes distorted while monitoring PAL signals, set the switch to the PAL position.

1 Press the POWER button ON. (One of the INPUT indicators will light.)

2 Press the INPUT SELECT button to obtain the input source you wish to monitor. (The INPUT indicator corresponding to the selected source will light.)

3 Adjust the VOLUME control.

Notes

- If the picture starts to break up due to insufficient voltage, do not continue viewing, but recharge the battery pack or replace it with a fully charged one.
- Recharging the battery pack before it fully discharges will prolong its service life.

Picture adjustments

- 1 V-HOLD control
- 2 Colour control
- 3 Brightness control (BRIGHT)
- 4 Contrast control (CONTR)

Colour, brightness and contrast are at standard settings when their control knobs are in central detente position.

1 V-Hold control

Turn clockwise or counterclockwise to stop vertical rolling of the picture.

2 Colour control

Turn until preferred degree of colour is obtained.
Clockwise: darker
Counterclockwise: lighter

3 Brightness control

Turn until the picture is not too light or too dark.
Clockwise: brighter
Counterclockwise: darker

4 Contrast control

Turn until the picture is comfortable to view.
Clockwise: higher contrast
Counterclockwise: lower contrast

IN CASE OF DIFFICULTY

Symptoms	Check points
No power	<ul style="list-style-type: none"> • Is the power supply unit correctly installed? • Is the battery pack charged? • Is the POWER switch of the connected AC power pack set to ON? • Is the car battery adapter correctly plugged in?
No picture, no sound	<ul style="list-style-type: none"> • Are the cables correctly connected to the input connectors? • Is the INPUT SELECT button set correctly? • Is VOLUME control set to "—"? • Is the audio output level of the connected external unit too low?
Wrong colour	<ul style="list-style-type: none"> • Is COLOUR control correctly adjusted?

SPECIFICATIONS

TM-P3E

Type	: Colour video monitor
Colour system	: PAL/SECAM
Picture tube	: 3"
Power requirement	: 110 – 240 V AC~, 50/60 Hz (via exclusive AC power pack AC-P3EG/EK) 12 V DC (exclusive battery pack NB-P3U or NB-P4U)
Power consumption	: 7.4 watts (with DC)
Video input	: 1 Vp-p, 75 ohms
Video output	: 1 Vp-p (Bridged output)
Audio input	: -6 dBs, 47 k-ohms (high impedance)
Audio output	: -6 dBs (Bridged output)
Built-in speaker	: 4 cm round, 14 Ω
Speaker output	: 170 mW
Dimensions	: 96 mm(W) x 79 mm(H) x 234 mm(D)
Weight	: 1.2 kg
Accessories	: DIN (6-pin) – BNC/MINI (3.5φ) cable

SECTION 1 DISASSEMBLY

1.1 HOOD

- 1) Remove two screws (A).
- 2) As viewed from the front, a latching tab is contained at the upper left. Remove the hood while raising this portion upward.

Fig. 1-1

1.2 TOP CABINET

- 1) Take out four screws (A).
- 2) Use a screwdriver to press latching tabs (B). Press right side of the cabinet and remove upward.

Fig. 1-2

1.3 CRT

- 1) Remove two screws (A).

Fig. 1-3

1.4 BOTTOM COVER

- 1) Remove two screws (A).

Fig. 1-4

1.5 CIRCUIT BOARD ACCESS

- 1) Remove the top cabinet and bottom cover.
- 2) Disengage the circuit boards of the sides from the rivets. The boards can then be opened outward as shown in the Fig. 1-5.

Fig. 1-5

1.6 WIRE CLAMPS AND BANDS

- 1) Observe that wire clamps are returned to their original positions.
- 2) Avoid removing the wire bands. If unavoidable be sure to reband in original manner using insulated tying material.

SECTION 2 ALIGNMENT PROCEDURE

2.1 B1 VOLTAGE (11 V)

Cut off the bright VR (R222) and sub bright VR (R221). Measure the voltage between TP-91 of the MAIN PWB Ass'y and ground. Adjust R905 (B1) to obtain 11 V. See Fig. 2-1.

Fig. 2-1

2.2 PURITY

- 1) Display a monochrome pattern.
- 2) As viewed from the back (See Fig. 2-2), turn the magnet lock counter-clockwise to loosen it.

Fig. 2-2

- 3) Turn the green cutoff VR (R705) fully clockwise and the red and blue cutoff VRs (R706, R704) fully counter-clockwise. Adjust the screen VR (Fig. 2-6) so that the vertical green band becomes easy to see.

Fig. 2-3

- 4) Loosen the deflection yoke securing screw and slide the yoke fully rearward to obtain colour shading in the green disk.
- 5) Overlap the two purity magnet tabs and set them to 12 o'clock position.

Fig. 2-4

- 6) Open and close the two purity magnets (scissor fashion) and adjust so that the green disk is positioned at the center of the picture. If green disk is not obtained, adjust for uniform overall colouration.

Fig. 2-5

- 7) Slide the deflection yoke forward and adjust its position so that the green colour completely fills the picture area.
- 8) Confirm that uniform overall rasters of both red and blue single colour rasters can also be obtained in the same manner.
- 9) Without moving the deflection yoke, tighten its securing screw. Tighten the magnet lock lightly.

2.3 FOCUS

Turn focus VR and adjust for the range of optimum overall picture focus. Within this range, set the VR to the most clockwise position. Also confirm that focus is obtained with a dark picture.

Fig. 2-6

2.4 CONVERGENCE

Note: Focus adjustment must be completed

A. Static convergence (center)

- 1) Employ a crosshatch pattern and adjust the brightness so that the image is clear, but slightly darkened.
- 2) Turn the red and blue cutoff VRs fully clockwise and the green cutoff VR fully counter-clockwise. Adjust the screen VR for an easily seen image. (See Fig. 2-3).
- 3) Adjust convergence roughly in the corner by tilting the deflection yoke vertically or horizontally, then insert a wedge between the yoke and CRT on top. (Fig. 2-9).

Fig. 2-7

- 4) Turn the two 4 pole convergence magnets and adjust so that red and blue become overlapped throughout the picture area to yield magenta. (Fig. 2-7).
- 5) Turn the green cutoff VR full clockwise and adjust the two 6 pole convergence magnets so that the green and magenta become overlapped throughout the picture area to yield white. (Fig. 2-8).
- 6) Repeat steps 4 and 5.

Fig. 2-8

B. Dynamic convergence (corner)

- 1) Remove the wedge.
- 2) Adjust convergence as shown in Fig. 2-10 by tilting the yoke up and down, then insert the wedge on top.
- 3) App'y (modeler's) glue on the wedges and magnets to fix.
- 4) Tighten the screw of the yoke.
- 5) Turn the magnet lock and tighten securely.

Fig. 2-9

Fig. 2-10

2.5 WHITE BALANCE

- 1) Display a monochrome pattern.
- 2) Set the switch SW203 to service position to obtain a single horizontal line.
- 3) Turn the red, blue and green cutoff VRs (R704, R705, R706) and the screen VR fully counter-clockwise to eliminate luminance. (see Fig. 2-3).
- 4) Gradually turn the screen VR clockwise to where single line of one of the colours appears.
- 5) Turn the cutoff VR of this colour clockwise about 10 degrees.
- 6) Again turn the screen VR so that this colour appears only faintly.
- 7) Adjust the other cutoff VRs so that the horizontal line becomes white.
- 8) Return the service lead to the normal position.
- 9) With a dark picture, perform fine adjustment to obtain optimum white balance.
- 10) With a bright picture, adjust the red and green drive VRs for optimum white balance.

Note: If vertical jittering occurs when the switch SW203 is set to the service position, short the No. 1 pin (green wire) of the deflection yoke to

the ground by jump wire. Remove the jump wire before setting the switch to the normal position when this adjustment completed.

2.6 PAL COLOUR CIRCUIT

- 1) Supply PAL colour bar signal to the line in connector.
- 2) Connect an oscilloscope to M4 (B-Y demod. output) with channel 1 (X axis), and to M3 (R-Y demod. output) with channel 2 (Y axis), and set both channels for 10mV/DIV.
- 3) Set the oscilloscope to X-Y mode so that the Lissajous figure appears.

Fig. 2-11

- 4) Supply 11 V DC to pin 26 of IC301 through 47 k ohm resistor from +B line.
- 5) Short pin 4 and pin 5 of IC301 with a jump wire.
- 6) Adjust R302 (PAL SUB COL) so that the Lissajous figure is not saturated.
- 7) Adjust T302 (CW TRANSF) for the minimum figure.
- 8) Adjust R321 (DL AMP) so that the figure becomes (B) from (A).

Fig. 2-12

- 9) Adjust T303 (DL P. TRANSF) so that the figure becomes (C) from (B).
- 10) Adjust C309 (OSC ADJ) so that the rolling colour stripes becomes thick and the rolling slows or stops.

2.7 SECAM COLOUR CIRCUIT

Note : PAL colour adjustment must be completed.

- 1) Supply SECAM colour bar signal.
- 2) Connect an oscilloscope to pin 27 of IC302.
- 3) Adjust T304 (BEL TRANSF) for the flat waveform as shown in Fig. 2-13 (B).

Fig. 2-13

- 4) Connect a digital voltmeter to pin 26 of IC302.
- 5) Adjust T305 (IDENT TRANSF) for the maximum DC voltage (about 8.5 V DC).
- 6) Adjust T306 (DISCRIM) and T307 (DISCRIM) so that the white bar becomes the same as when AUTO/PAL switch is set to PAL position.

2.8 SUB CONTRAST AND SUB BRIGHTNESS

Display a picture and set the front panel contrast and brightness controls to the center click positions. Adjust R216 (subcontrast) and R221 (sub-brightness) of the main board for optimum display.

Fig. 2-14

2.9 V. HEIGHT AND V. CENTER

Display a pattern which allows easy confirmation of symmetry (such as a circle or crosshatch). Adjust R407 (V. height) for optimum size relationships. Turn R410 (V.center) to adjust picture center.

Fig. 2-15

2.10 H. CENTER & H. HOLD

- 1) Display a monochrome pattern.
Set H. center switch (S501) to the optimum horizontal picture position.
- 2) Turn H. hold VR counterclockwise when the picture is slanting to the right and clockwise when slanting to the left. (see Fig. 2-6).

Fig. 2-16

SECTION 3 REPACKING

Symbol No.	Part No.	Part Name	Description	Q'ty
1	CP30043-A02	Set Cover	for Set	1
2	CP10183-001	Cushion		1
3	"	"		1
4	CP10182-A03	Packing Case	Incl. (6) - (9)	1
5	CM30751-008	Envelope		1
6	PU30425-506	Instruction Book		1
7	"	"		—
8	A76332-2	Customer Notice		1
9	A29639	REC Keeping Card		1

11	CP10070-008	Packing Case	Master Carton	1

SECTION 4

EXPLODED VIEWS AND PARTS LIST

4.1 SAFETY PRECAUTION

Parts identified by the  symbol are critical for safety. Replace only with specified part numbers.

4.2 SCREW/WASHER/E-RING CODING

Classification (first digit)

Symbol Letter	Name
S	Normal screw
N	Assembly screw
L	"
D	"
M	Wood screw
F	Feather screw
T	Set screw
Y	"
B	Bolt
N	Nut
W	Washer
R	E-ring
E	Eyelet
P	Spring
G	Washer head screw

Material (third digit)

Symbol Letter	Material
S	Steel
E	Stainless steel
C	Cast iron
U	Bronze
B	Brass
P	Phosphor bronze
N	German silver
Y	Brass
A	Aluminum
Z	Zinc alloy
K	Polycarbonate

Shape of Screw Head (second digit)

Symbol Letter		Shape of Screw Head
P		Pan head
S		Flat countersunk head
H		Oval countersunk head
D		Binding head
R		Round head
B		Round head
T		Truss head

Type of Screw (fourth digit)

Symbol Letter	Type of Screw
P	Cross-Recessed head screw
A	Tapping screw
B	Special tapping screw
T	Special tapping screw
E	Special tapping screw
F	Special tapping screw

Diameter and Length of Screw (fifth – eighth digit)

Surface Treatment (ninth digit)

Symbol Letter	Surface Treatment
Z	Galvanization, dichromic acid treatment (MFZn2-C)
N	Nickel plating (MFNi2, MFNi1)
R	Chrome plating (MBCr2, MBCr1)
G	Silver plating (SP4)
W	Nichrome platings
P	Phosphite treatment
B	Bronze plating

A	Red coloring after galvanization
C	Blue coloring after galvanization
T	Green coloring after galvanization
V	Violet coloring after galvanization
F	Iron with black coloring

4.3 GENERAL ASSEMBLY

SAFETY PRECAUTION

Parts identified by the Δ symbol are critical for safety.
Replace only with specified part numbers.

5.2 SCHEMATIC DIAGRAM

- NOTE
- 1) ALL VOLTAGES SHOW READINGS BY CIRCUIT TESTER (20 K Ω /V) ON RECEPTION OF 1Vp-p COLOR BAR VIDEO SIGNAL.
- 2) ALIGNMENT OPERATION FOR USER SERVICE
- 3) ALL RESISTANCE VALUES ARE IN OHMS.
K: 1.000 Ω M: 1.000.000 Ω
WATAGES ARE 1/4 W UNLESS OTHERWISE INDICATED.
- UNSPECIFIED : CARBON RESISTOR $\pm 5\%$
COMP : COMPOSITION RESISTOR $\pm 10\%$
CMR : OXIDE METAL FILM RESISTOR
CMRF :
- 4) CAPACITANCE VALUES LESS THAN 1 ARE IN μ F AND 1 AND ABOVE IN PF EXCEPT THAT ELECT. CAPACITORS ARE IN μ F. RATING VOLTAGE IS 50 WV UNLESS OTHERWISE INDICATED. TOLERANCE FOR CAPACITANCE
J $\pm 5\%$ K $\pm 10\%$ M $\pm 20\%$ Z $\pm 80\%$
UNSPECIFIED : CERAMIC CAPACITOR
1000 pF AND ABOVE $\pm 20\%$
LESS THAN 1000 pF $\pm 5\%$
ELECT. CAPACITOR :
 $\pm 10\%$ LESS THAN 4.7 μ F $\pm 75\%$
CAPACITANCE (μ F)/WORKING VOLTAGE
- 5) SELECTOR SW (POSITION)
- | Symbol | Description |
|--------|------------------|
| S201 | INPUT SELECT SW |
| S203 | SERVICE SW |
| S301 | COLOUR SYSTEM SW |
| S501 | H. CENTER SW |
| S901 | POWER SW (OFF) |
- 6) THERMAL DEVIATION $\pm 10\%$
CH,RH : TEMPERATURE COEFFICIENT $\pm 5\%$
PP : POLYPROPYLENE CAPACITOR $\pm 10\%$
MY : MYLAR CAPACITOR $\pm 10\%$
TA : TANTAL ELECT. CAPACITOR $\pm 20\%$
PS : POLYSTYROL CAPACITOR $\pm 5\%$

SHAFETY PRECAUTION
The Δ symbol and shaded () are critical for safety. Replace only with specified part numbers.

H I J K L M N O P Q R

1 ARE IN μF AND 1 AND CAPACITORS ARE IN μF . OTHERWISE INDICATED.

80 $\pm 20\%$ CAPACITOR ABOVE $\pm 20\%$ 100 pF $\pm 5\%$ 75 μF WORKING VOLTAGE

5) SELECTOR SW (POSITION)

- S201 : INPUT SELECT SW
- S203 : SERVICE SW
- S301 : COLOUR SYSTEM SW
- S501 : H. CENTER SW
- S901 : POWER SW (OFF)

- B : THERMAL DEVIATION $\pm 10\%$
- CH, RH : TEMPERATURE COEFFICIENT $\pm 5\%$
- PP : POLYPROPYLENE CAPACITOR $\pm 10\%$
- MY : MYLAR CAPACITOR $\pm 10\%$
- TA : TANTAL ELECT. CAPACITOR $\pm 20\%$
- PS : POLYSTYROL CAPACITOR $\pm 5\%$

6) SYMBOL NUMBERS OF THE SUBMINIATURE CHIP PARTS (RESISTORS, CAPACITORS) ARE NOT UNDERLINED. (EX.) R151, C151

VALUES ARE CALCULATED AS FOLLOWS :

< Chip Resistor >

< Chip Capacitor >

with specified part numbers.

NUMBERS OF THE SUBMINIATURE CHIP PARTS
 (RESISTORS, CAPACITORS) ARE NOT UNDERLINED.

RESISTOR

ARE CALCULATED AS FOLLOWS :

Resistor

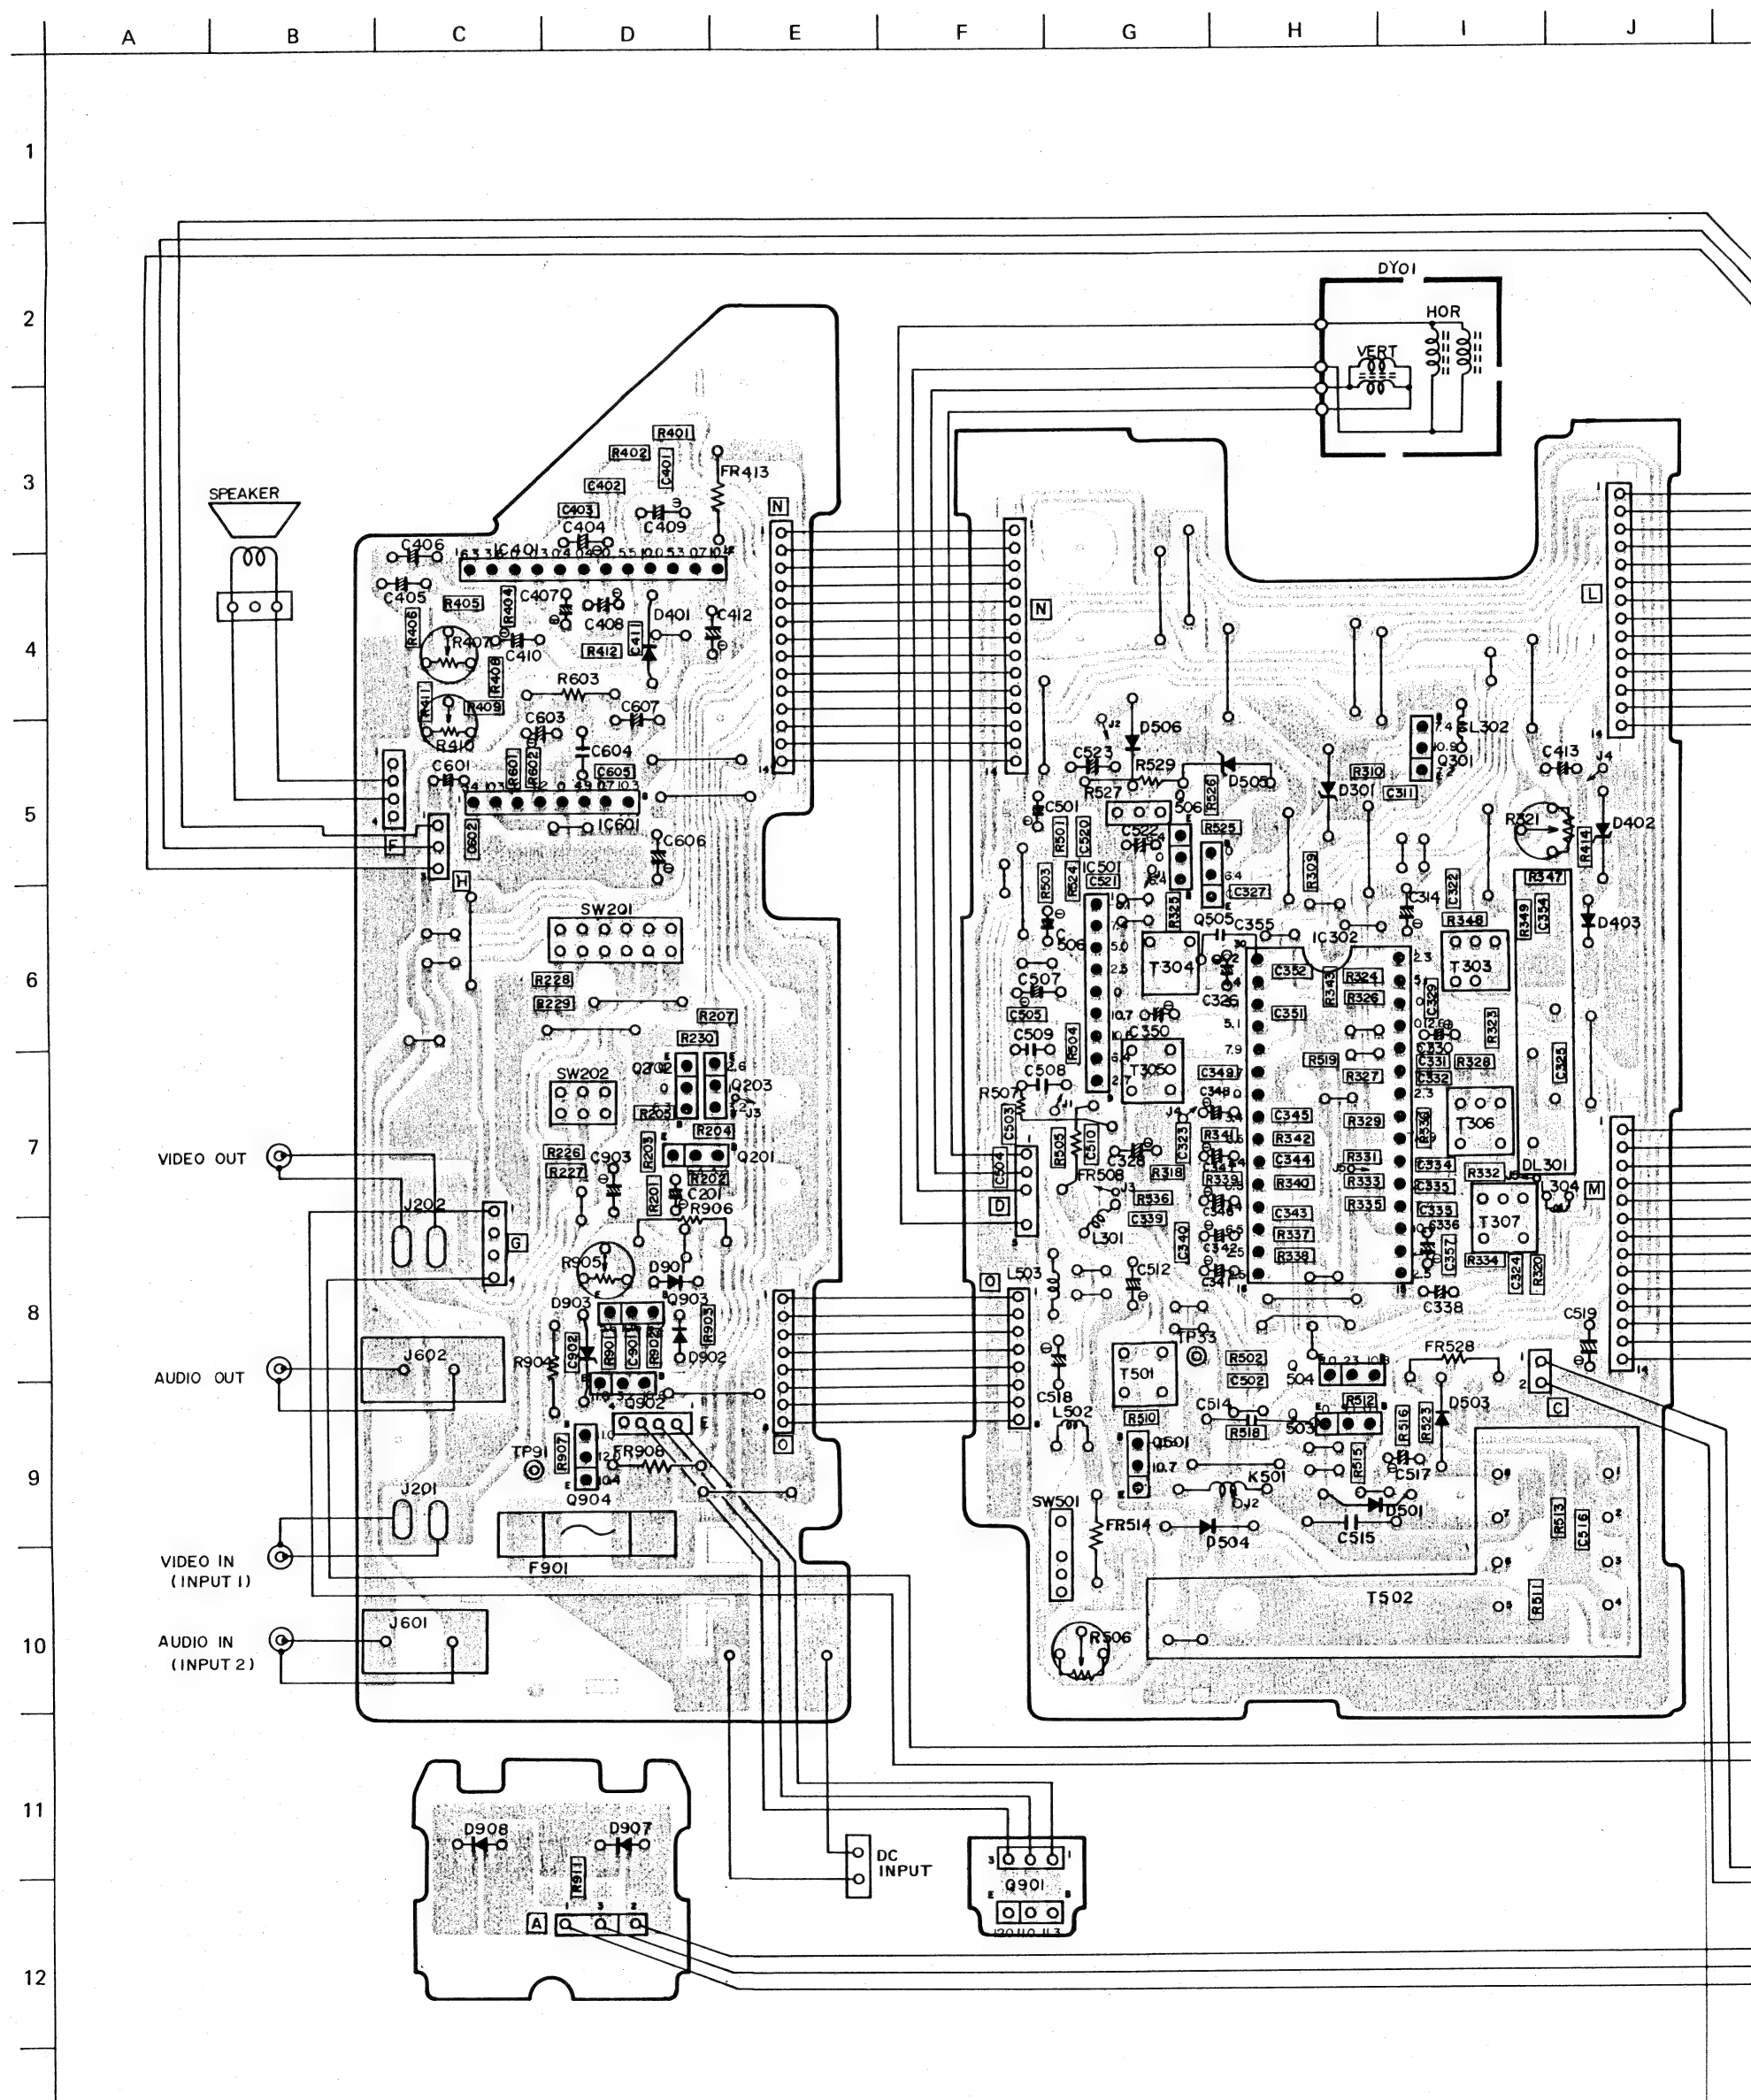

< Chip Capacitor >

K, M, Z Tolerance
 C, P, R, S, T, U Temperature
 Compensation type

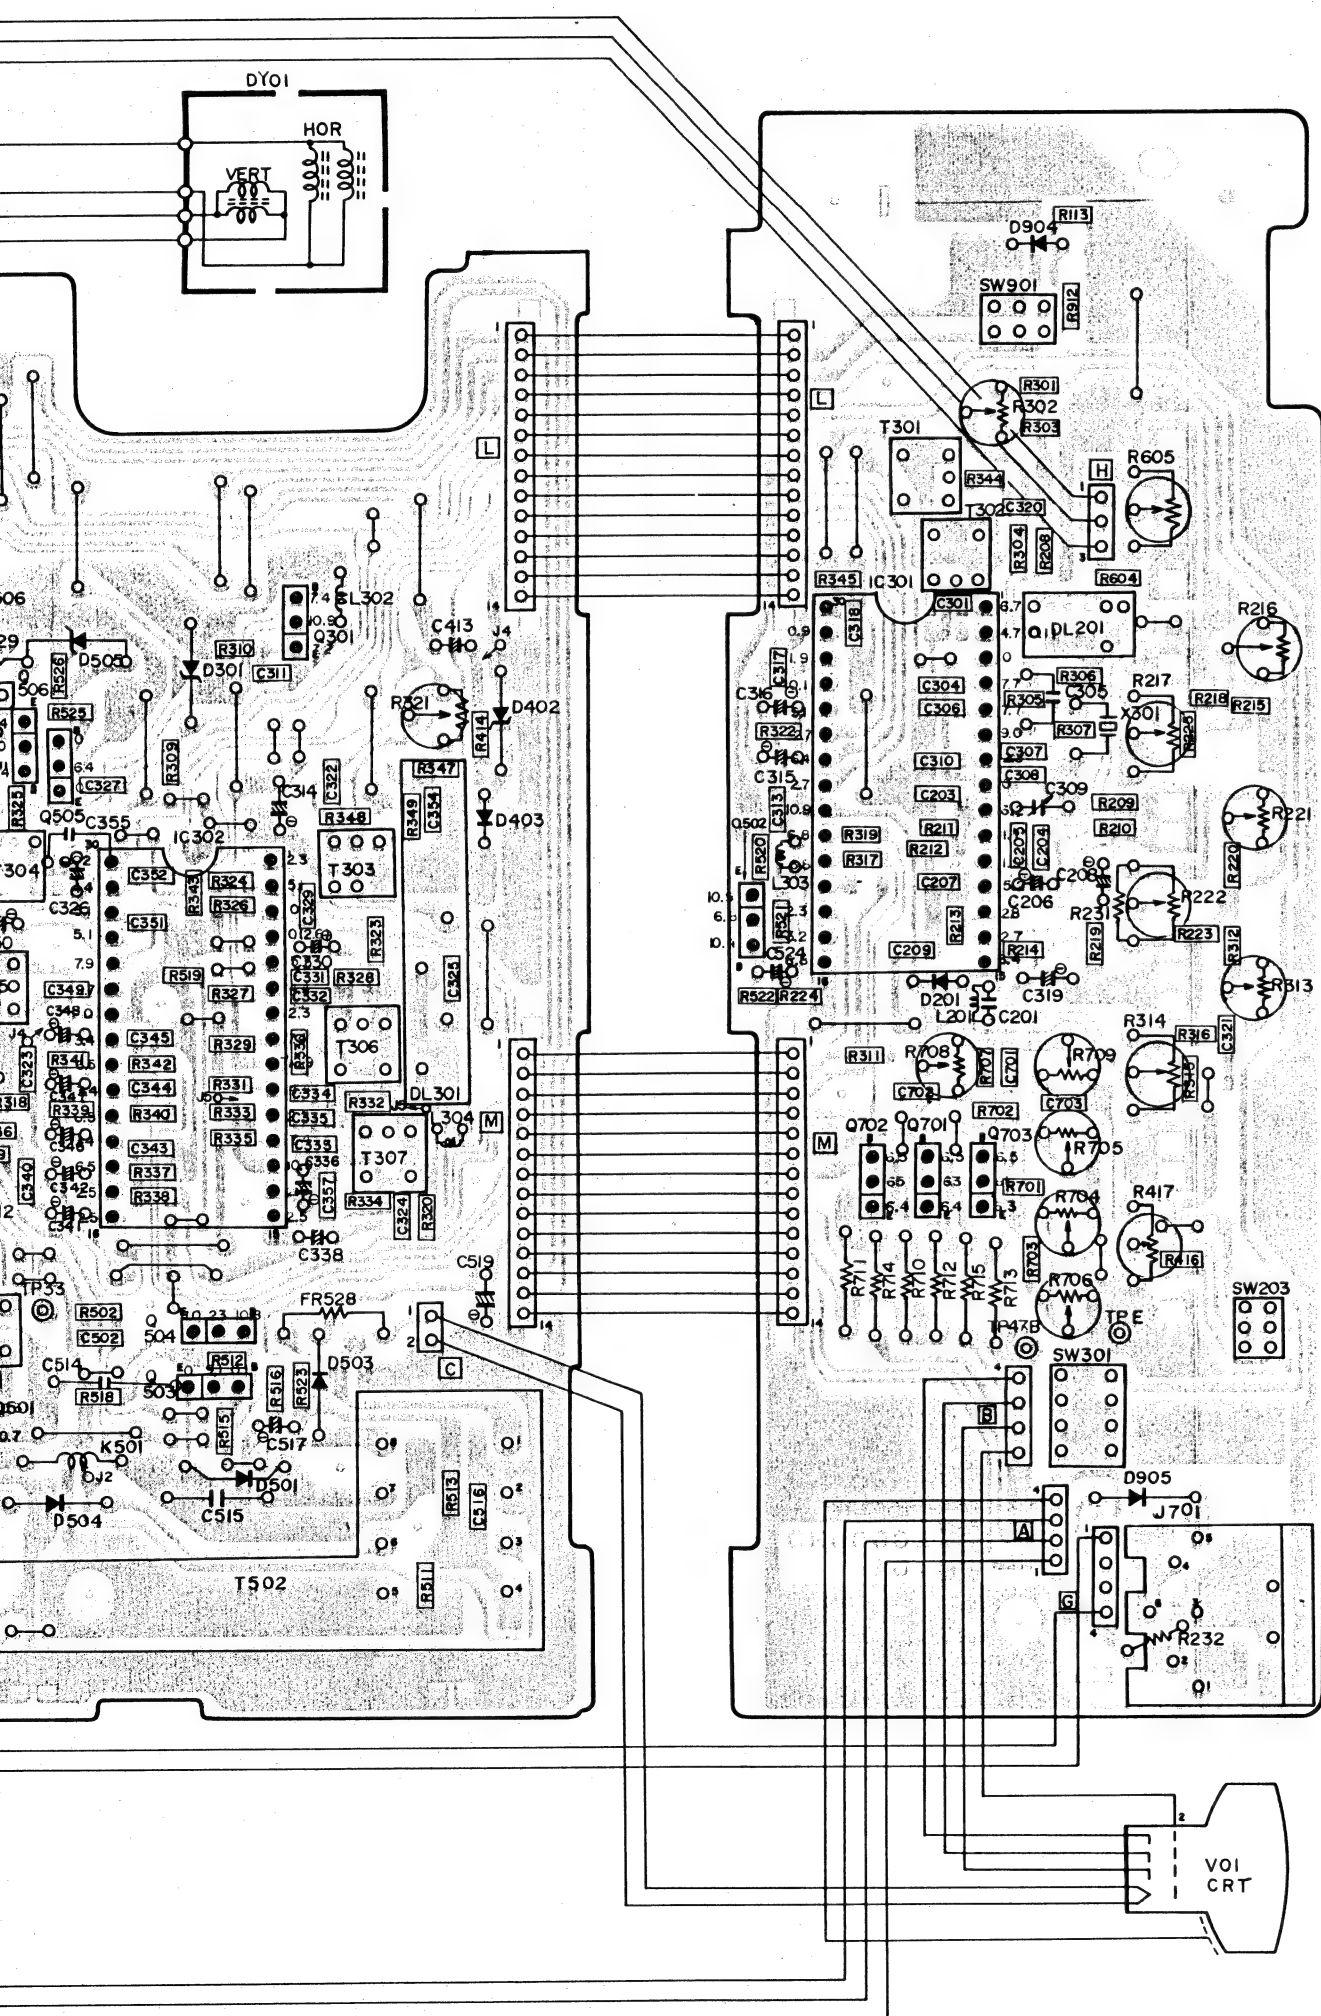

2 3
 2 x 10³(ohm) = 12(Kohm)

2 3
 12 x 10³(PF) = 12 x 10⁻³(μF) = 0.012(μF)

SECTION 6 ELECTRICAL PARTS LIST

1. SAFETY PRECAUTION

Parts identified by the \triangle symbol are critical for safety.

Replace only with part numbers specified.

2. Abbreviations in this list are as follows:

RESISTORS — All resistance values are in ohms (Ω).

K	: 1 000
M	: 1 000 000
CR	: Carbon Resistor
Comp. R	: Composition Resistor
WR	: Wire Wound Resistor
OMR	: Oxide Metal Film Resistor
VR	: Variable Resistor (Potentiometer)
MFR	: Metal Film Resistor
FR	: Fusible Resistor

CAPACITORS — All capacitance values are in μF , unless otherwise indicated.

P	: μF
C Cap	: Ceramic Capacitor
E Cap	: Electrolytic Capacitor
FM Cap	: Film Mica Capacitor
MM Cap	: Metalized Mylar Capacitor
MP Cap	: Metalized Paper Capacitor
MY Cap	: Mylar Capacitor
NP Cap	: Non-polar Capacitor
PC Cap	: Polycarbonate Capacitor
PP Cap	: Poly Pro Capacitor
PS Cap	: Polystyrol Capacitor
T Cap	: Tantalum Capacitor
TR Cap	: Trimmer Capacitor
Chip R.	: Chip Resistor
Chip C Cap	: Chip C Capacitor

Tolerances of resistors or capacitors are as follows:

M	: $\pm 20\%$
K	: $\pm 10\%$
J	: $\pm 5\%$
G	: $\pm 2\%$
F	: $\pm 1\%$
